Sewage treatment facility

WATER MANAGEMENT

Inlet / Outlet Gate

Installed in sewage treatment plant inlet and outlet channel to control flow rate and use for maintenance

Sludge collector

It is applied to the precipitation process of Equipment to collect odor from odor generating particulate matter in the purification process | facility and remove it with microorganism or of water and sewage, and automatically collects and scrapes sedimentation sludge.

Dehydrator

dried solid without moisture contained in surplus or mixed sludge.

Screw conveyor

A machine to continuously convey sludge, sand, impurities by rotating a shaft attached with a spiral wing in a trough.

Equipment to protect pipes, pumps and machinery by removing dirt and other contaminants from sewage.

Deodorization machine

chemical liquid.

Chemical injector

Sulfuric acid tank

Using Rotational Force, it emits cake type It is a facility to sanitize and disinfect water and underground water. It is used to sanitize and disinfect sewage and wastewater.

sulfuric acid and fuming sulfuric acid in a load automatically to the vehicles. liquid state.

stores dangerous substances, concentrated discharging various contaminants, and to

Head-Office 219, Yehak-ro 1-gil, Bujeok-myeon, Nonsan-si, Chungnam-do, S. Combined screen and non-shaft screw conveyor, this all-in-one device removes the impurities and sand contained in influent water at the same time.

Concentrator

It is used when the collection of solids are poor due to sedimentation of exceeded and mixed sludge. Also it is used in simplyfying the sludge treatment process.

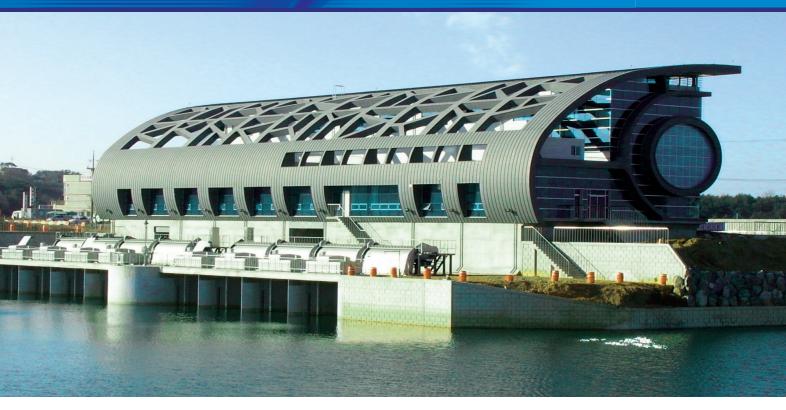

Air conveyor

Hopper

A transfer facility to use compressed air to transport moisture-containing materials such as sludge cake, sand, impurity.

Water Treatment Solutions

We provide an optimum solution for water management

DAEHAN E&C Engineering & Construction

Water gate

Water gate

Movable weir

Usage

Used where water level adjustment is required such as river, lake Preserve freshwater and prevent disaster

Feature

- · Can adjust water level by opening or closing angle
- High fresh water storability
- Rapid discharge of fresh water when heavy rain
- Semi-permanent longevity [Using stainless steel]

Roller gates

- Usage Drainage sluice gates for rivers, levee, seawalls, and dams Medium-large water gate.
- To open and close, the attached roller gates are used

Feature

- Can adjust water level by opening or closing angle
- High fresh water storability
- Rapid discharge of fresh water when heavy rain • Semi-permanent longevity [Using stainless steel]

Sluice gate

Usage Installed for inlet water

channel of reservoirs and water tower of dams Usage for polluted areas and environment related water treatment places

For drainwaterway,

Supplywaterway

Feature

- Strong structure and resistant to corrosion
- Use for high water pressure
- Precise and accurate operation- usage for high water leakaging

Jsage

Integral type gate

Feature

- One whole body to hoist
- Easy to install
- Reduction of construction cost
- Use various rubber parts

Radial gate

Feature

- Very strong gate with frame structure
- Opening and closing the water gate using a hydraulic cylinder or wire rope winch

Jsage

seawalls

Trunnion Pin

Large water gates

used for dam gates and

To open or close, gates

One-way flow that prevents

water form flowing into

the water level is high, it

automatically opens and

closes to discharge the

separate driving device

water to the river without a

revolves around the

Flap gates

Usage

Feature

- Less corrosive and light with FRP, STS material
- Excellent exponential effect(water stop effect) using K-type rubber
- Automatic opening and closing by water pressure

Y-Type gate

Usage Medium and large By one way water blocks.

Feature

- Can adjust water level by opening or closing angle
- High fresh water storability
- Rapid discharge of fresh water when heavy rain

Trash remover

Feature

Feature

Feature

Feature

Hoist

Feature

water gates for rivers, drainwaterways, supplywaterways it blocks the influx from outside

- Semi-permanent longevity [Using stainless steel]

Rotary type trash remover

Usage : Remove floating matters from drainage pumping stations, sewage treatment, waste water treatment and industrial sewage treatment plants

 Automatic operation of rake circulation type Can be operated in conjunction with pump Continuous processing with several rakes Unmanned automatic operation system

Hydraulic type trash remover

Usage : Remove floating matters from drainage pumping stations, sewage treatment, waste water treatment and industrial sewage treatment plants

• Handles multiple water channel with one machine Easy Installation and cost reduction Fewer faults, easy to repair Unmanned automatic operation system

Wire drum type hoist

Usage: To lift seawalls sluice gates, drainage sluice gates and dam sluice gates by using wire ropes

Hoisting ablity : 5 TON ~ 50 TON

• For medium and large loads and for more than 5 tons Hoisting using wire rope No restriction on hoisting height • No impact to hoist and sluice when opening and closing the sluice gates

Pinjack type hoist

Usage : Sluice gate such as rivers, levee, drain pumping station by using rack bars

Hoisting ablity : 1 TON ~ 20 TON

• Single / double, manual / auto mode Fast hoisting speed and strong lifting ability Protect hoist, water gate and rack bar by attacking shock absorber to rack bar Increased safely with dual brake system · Easy checking to open or close the gates by opening meter

Hydraulic type hoist

Usage : Hydraulic hoist bottom hinge flap gate of rivers, levee, etc.

Hoisting ablity : 1 TON ~ 500 TON

Smooth hydraulic operation Safe operation without damaging the machines due to overload, impact load, etc. Emergency power generator against power failure Free adjustment for opening and closing positions Adjustable water level
